Laurie Chang A16891192

The PDB Database

Here we examine the sie and composition of the main database of biomolecular structures - the PDB.

Get a CSV file from the PDB and read it into R.

```
pdbstats <- read.csv("Data Export Summary.csv", row.names = 1)
head(pdbstats)
```

	X.ray	EM	NMR	Multiple.methods	Neutron	Other
Protein (only)	161,663	12,592	12,337	200	74	32
Protein/Oligosaccharide	9,348	2,167	34	8	2	0
Protein/NA	8,404	3,924	286	7	0	0
Nucleic acid (only)	2,758	125	1,477	14	3	1
Other	164	9	33	0	0	0
Oligosaccharide (only)	11	0	6	1	0	4

	Total
Protein (only)	186,898
Protein/Oligosaccharide	11,559
Protein/NA	12,621
Nucleic acid (only)	4,378
Other	206
Oligosaccharide (only)	22

> Q1: What percentage of structures in the PDB are solved by X-Ray and Electron Microscopy.

```
((182348 + 18817)/215684)*100
```

```
[1] 93.26839
```

My pdbstats data frame has numbers with commas in them. This may cause us problems; let's see:

```
pdbstats$X.ray
```

```
[1] "161,663" "9,348"   "8,404"   "2,758"   "164"     "11"
```

These are not seen as numbers! How do we convert characters to numbers?

The function `as.numeric` does not work with commas.

`gsub()` function to remove commas from the column, then convert the column to numeric values using `as.numeric`.

`gsub()`

inside the parenthesis ("what you are looking for", "replacement", "column")

```
pdbstats$X.ray <- gsub(",", "", pdbstats$X.ray)
head(pdbstats$X.ray)
```

```
[1] "161663" "9348"   "8404"   "2758"   "164"    "11"
```

```
pdbstats$X.ray <- as.numeric(pdbstats$X.ray)
head(pdbstats$X.ray)
```

```
[1] 161663   9348   8404   2758    164     11
```

Turn this into a function in order to complete this for all the other columns!

```
commasum <- function(x) {
  sum(as.numeric(gsub(",", "", x)))
}

commasum(pdbstats$X.ray)
```

```
[1] 182348
```

Apply this for all the columns!

```
totals.column <- apply(pdbstats, 2, commasum)

totals.column["Total"]
```

```
 Total
215684
```

```
round(totals.column/totals.column["Total"]*100, 2)
```

```
          X.ray              EM             NMR Multiple.methods
          84.54            8.72            6.57            0.11
        Neutron           Other           Total
           0.04            0.02          100.00
```

93.26839% of the structures in the PDB are solved by X-ray and Electron Microscopy.

Q2: What proportion of structures in the PDB are protein?

```
((186898 + 11559 + 12621)/215684)*100
```

```
[1] 97.86447
```

97.86447% of structures in the PDB are protein.

Visualizing Protein Structure

We will learn the basics of Mol* (mol-star).

We will play with PDB code 1HSG.

Back to R and working with PDB structures

Predict the dynamics (flexibility) of an important protein:

```
library(bio3d)

hiv <- read.pdb("1hsg")
```

```
  Note: Accessing on-line PDB file
```

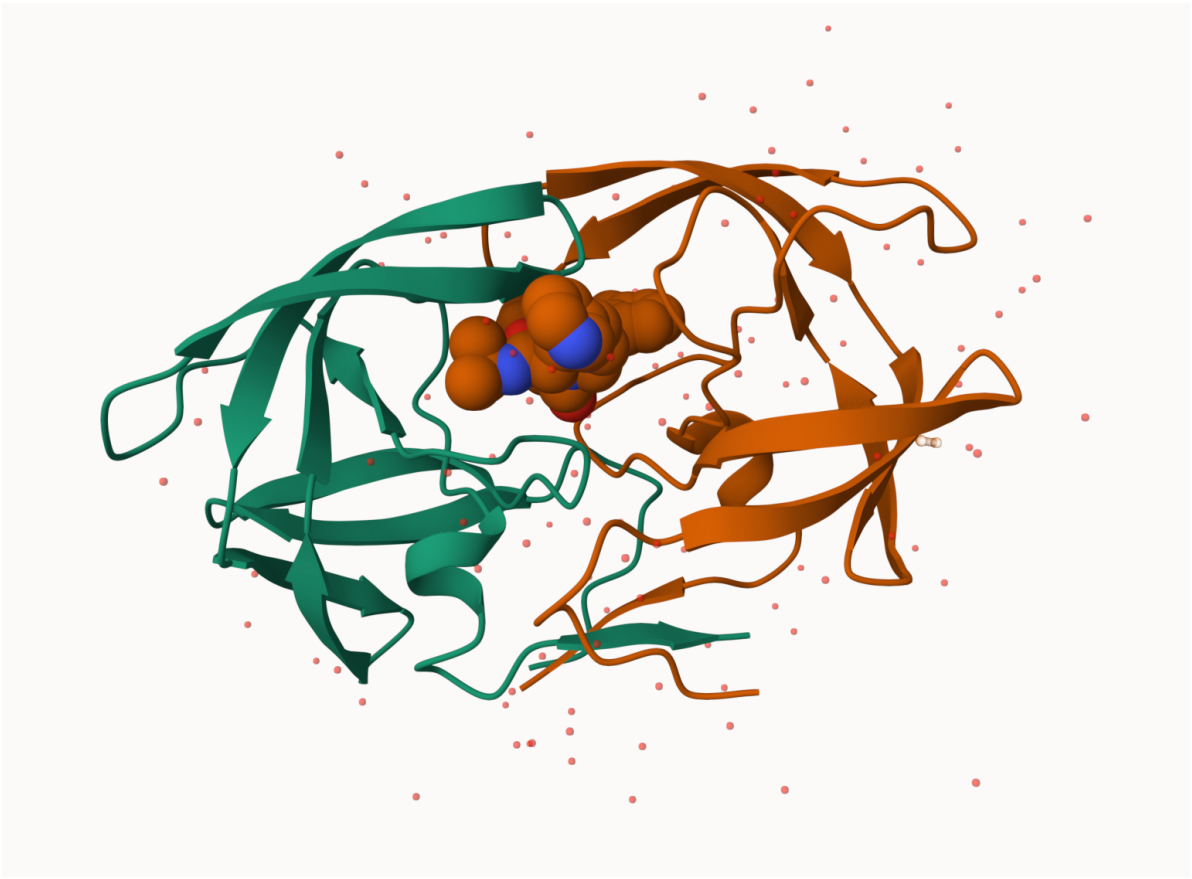

Figure 1: Hiv-Pr molecule bound to ligand

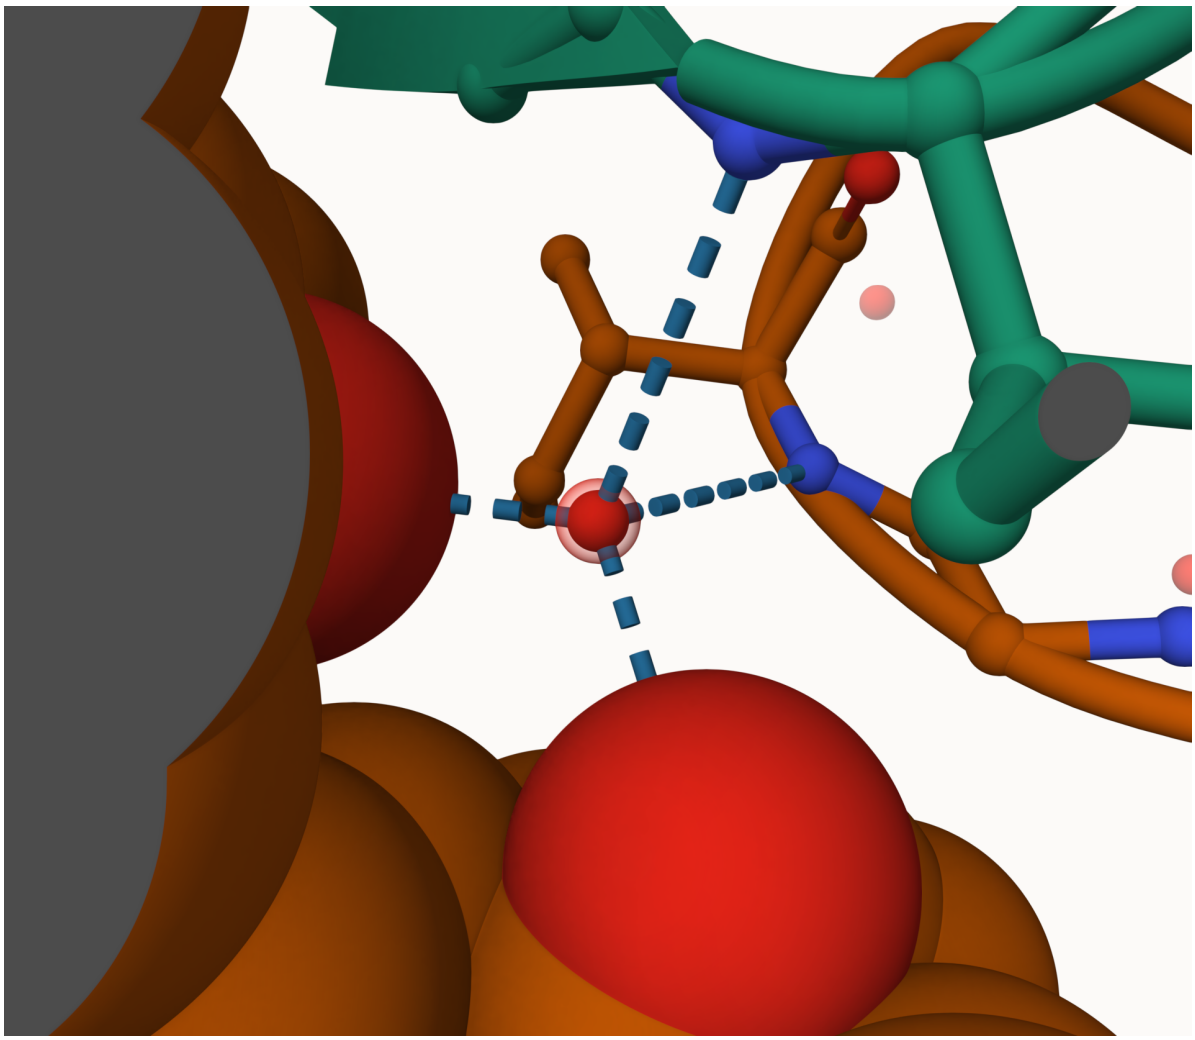

Figure 2: O 308

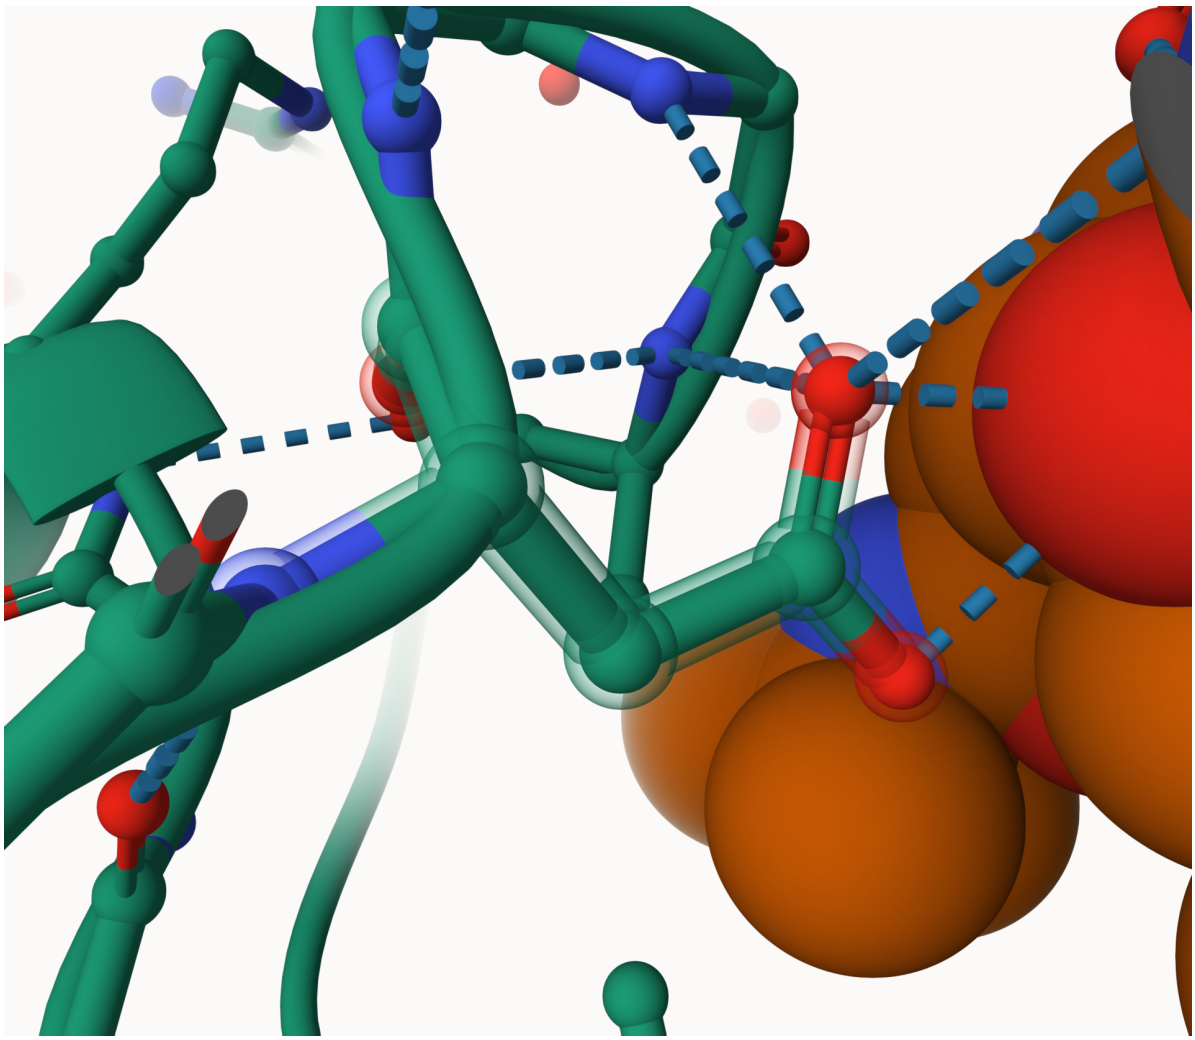

Figure 3: Catalytic Asp25

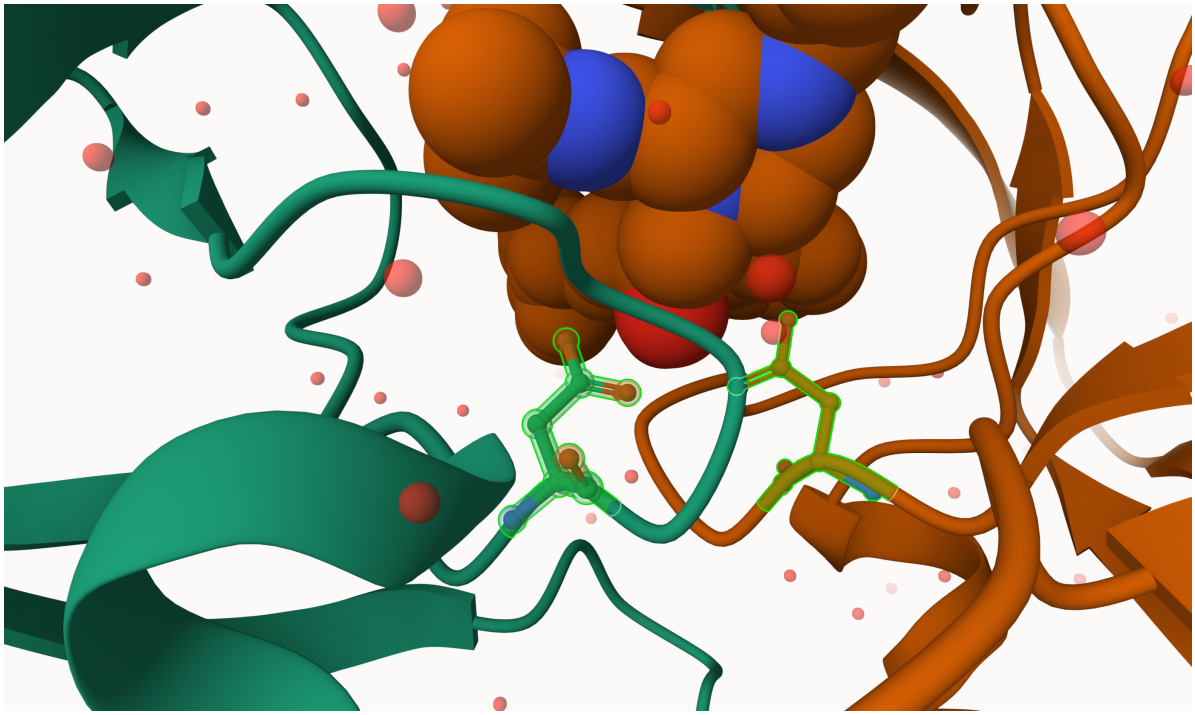

Figure 4: Marked Catalytic Asp25

```
hiv
```

```
Call:  read.pdb(file = "1hsg")

```

Here we will do a Normal Mode Analysis (NMA) to predict functional motions of a kinase protein.

```
adk <- read.pdb("6s36")
```

```
  Note: Accessing on-line PDB file
   PDB has ALT records, taking A only, rm.alt=TRUE
```

```
adk
```

```
 Call:  read.pdb(file = "6s36")

   Total Models#: 1
     Total Atoms#: 1898,  XYZs#: 5694  Chains#: 1  (values: A)

     Protein Atoms#: 1654  (residues/Calpha atoms#: 214)
     Nucleic acid Atoms#: 0  (residues/phosphate atoms#: 0)

     Non-protein/nucleic Atoms#: 244  (residues: 244)
     Non-protein/nucleic resid values: [ CL (3), HOH (238), MG (2), NA (1) ]

   Protein sequence:
      MRIILLGAPGAGKGTQAQFIMEKYGIPQISTGDMLRAAVKSGSELGKQAKDIMDAGKLVT

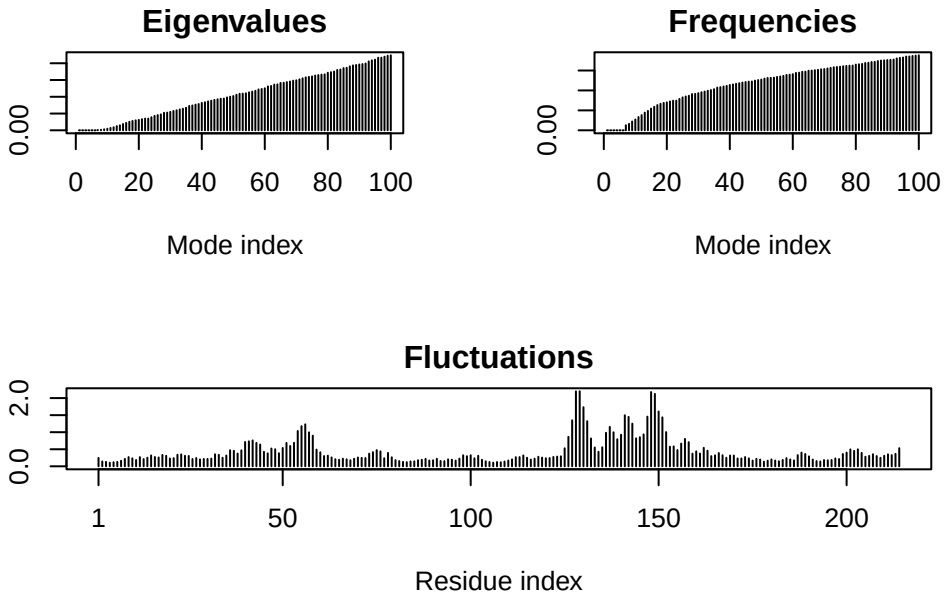
      VGRRVHAPSGRVYHVKFNPPKVEGKDDVTGEELTTRKDDQEETVRKRLVEYHQMTAPLIG
      YYSKEAEAGNTKYAKVDGTKPVAEVRADLEKILG

+ attr: atom, xyz, seqres, helix, sheet,
        calpha, remark, call
```

```
modes <- nma(adk)
```

```
 Building Hessian...        Done in 0.015 seconds.
 Diagonalizing Hessian...   Done in 0.299 seconds.
```

```
plot(modes)
```



Make a "movie" called a trajectory of the predicted motions:

```
mktrj(modes, file="adk_m7.pdb")
```

Then I can open this file in Mol*…
